Delhi, India • ksiddhant705@gmail.com • +91 9817531780

LinkedIn: [linkedin.com/in/sidhantkaushik/](https://www.linkedin.com/in/sidhantkaushik/) • GitHub: [github.com/sidkaushikk](https://github.com/sidkaushikk) • Portfolio: <https://sidkaushik-portfolio.vercel.app>

## EDUCATION

### B.Tech, Computer Science & Engineering (AI Specialization)

2024 – 2028

University School of Information Technology, Guru Gobind Singh Indraprastha University, Delhi

## TECHNICAL SKILLS

**Languages:** Python, JavaScript, TypeScript, C++, SQL

**Frameworks:** React.js, Node.js, Express.js, FastAPI, Vite, Tailwind CSS

**AI / ML:** PyTorch, scikit-learn, NumPy, Pandas, Librosa, NVIDIA NIM, LLM Integration, Deep Learning

**Databases:** MongoDB, MySQL, PostgreSQL

**Tools:** Docker, Kubernetes, REST APIs, Git, GitHub, Vercel, VS Code

**Concepts:** Full Stack Development, OOP, System Design, Data Structures & Algorithms, API Architecture

## PROJECTS

### Vitalyn — Multimodal Healthcare Intelligence Platform | React · FastAPI · PyTorch · NVIDIA NIM · scikit-learn

- Engineered a dual-sided clinical platform processing real-time patient vitals, facial video, and voice inputs through a multi-modal ML pipeline — all production models, zero synthetic mocking.
- Built three independent ML inference services: Random Forest vitals risk engine trained on MIMIC-III clinical data, PyTorch-based facial fatigue classifier, and RAVDESS-trained voice stress model.
- Integrated NVIDIA NIM (LLaMA-3.3-70B via OpenAI SDK) as a clinical reasoning layer to auto-generate structured SOAP-format medical reports from fused multi-modal inference outputs.
- Designed FastAPI (Python) RESTful services linking a React/TypeScript/Tailwind CSS frontend to three ML engines; built OPD CareQueue system with post-op monitoring, real-time alerting, and digital report delivery.

### CypherX — Real-Time URL Phishing Detection System | Node.js · Express.js · JavaScript · Vercel

- Designed and deployed a full-stack cybersecurity platform that detects phishing URLs in real time using Google's Safe Browsing API and multi-layer heuristic analysis, returning categorized risk assessments in under 2 seconds.
- Built a Node.js/Express.js REST API backend with structured routing to process URL scan requests and return categorized, risk-tiered threat assessments.
- Developed a responsive Vanilla framework frontend delivering actionable safety reports; deployed on Vercel with production-grade configuration for public access and scalable request handling.

## WORK EXPERIENCE

### Software Developer Intern · Hitachi Systems India Pvt. Ltd. · Gurugram

Jul 2026 – present

- Working on full stack web development applications using MERN stack and collaborating with senior developers to implement and maintain software features.
- Participating in code reviews, debugging and testing to improve application reliability.

### Content & Social Media Marketing Intern · PoolIt · Remote

Feb 2025 – May 2025

- Achieved a 30% increase in follower engagement by designing and executing data-driven content calendars across Instagram and LinkedIn.
- Conducted competitor analysis and market research to identify high-performing content formats, directly improving campaign strategy and reach.
- Produced brand-aligned creatives in collaboration with design and strategy teams, contributing to weekly performance reporting and KPI tracking.

## ACHIEVEMENTS & HACKATHONS

- 2nd Place (103 Teams) — HackDUCS Hackathon, Delhi University North Campus
- Top 7 (500+ Teams) — Orbix Hackathon, IIIT Delhi
- Delivered 5 production-grade full-stack applications as a freelance developer

## CERTIFICATIONS & EXTRACURRICULAR

- AI/ML & Data Science Engineering — Prime Batch, Apna College
- PR & Communications Lead, CSR Club, USICT — spearheaded promotional campaigns and inter-college event management
- Competitive Chess Player — represents institution at inter-college chess tournaments and competitions
